

Full-Stack Scaffold

Revolutionizing Application Development

Project Demo: Manus Task Management App

Real-World Implementation

- ✓ Complete task management application built to showcase skill capabilities.
- 🗂️ Unified management of multiple services and frontend apps.

GitHub Integration

- 🐙 Deployed to mechristjesus-code repository for immediate access.
- 🚀 Production ready with infrastructure and environment management.

Scalable Microservices Pattern

API Gateway

Centralized entry point for all client requests, ensuring security and efficient routing across microservices.

Service Isolation

Independent PostgreSQL instances for auth and tasks, ensuring loose coupling and data integrity.

Shared Package

Centralized directory for common logic like security, DB config, and logging shared across all services.

Robust FastAPI Microservices

Auth Service

-  Secure user registration & login
-  JWT token generation & validation
-  Password hashing via Passlib

FastAPI

SQLAlchemy

PostgreSQL

Tasks Service

-  Efficient CRUD operations
-  Pydantic data validation
-  Dedicated data persistence

Pydantic

Uvicorn

Python 3.11

Modern React/TypeScript UI

The Core Stack

-  React 18 with Functional Components
-  TypeScript for End-to-End Safety
-  Tailwind CSS for Utility-First Styling
-  Zustand for Lightweight State

Performance & Maintenance

- **Type Safety:** Catch errors during development rather than at runtime.
- **Modular Design:** Reusable components ensure a consistent UI/UX across the app.
- **Fast Refresh:** Optimized development workflow with Vite for instant hot-reloading.
- **Responsive:** Mobile-first approach built directly into the styling foundation.

Infrastructure & Deployment

Docker Orchestration

-  One-command setup for the entire stack using Docker Compose.
-  Containerized services ensure consistency across dev and prod.

Environment & CI/CD

-  Structured `.env.example` for secure and flexible configuration.
-  Foundational structure for automated testing and deployment.

Accelerate Your Development

Efficiency

Save days of boilerplate setup and focus on core features.

Consistency

Standardized patterns across all your projects.

Scalability

Grow from a simple app to a complex ecosystem.

Empower your workflow with the Full-Stack Scaffold skill.
